Abstract
Kashmir has been a space of debate since past over seventy years testing the harmony and strength of the South-Asian region. Kashmir Valley has been since quite a while ago caught in a furnished clash between Kashmiri insurgent and Indian security powers. The immediate outcomes had been numerous issues for the entire State and all the more especially for the Kashmir Valley. The furnished struggle in the territory of Jammu and Kashmir has contacted the existences of the relative multitude of individuals living in the However; numerous youth have become immediate and aberrant casualties of this conflict. They have confronted viciousness either in a roundabout way as misfortune/passing of precious ones or become the immediate casualties of torture, assault and so forth The paper is a psychological record of the encounters of the adolescent who have lost their lives, relatives to this Conflict happening in the Valley from the most recent twenty years. The Paper features with regards to what degree the conflict has psychologically impacted the youth of Kashmir Valley somehow or another or the other.

Keywords: Kashmir Conflict, Killings, Depression, Tortures, Fake encounters and mental health etc.

Methodology
The study adopted Document analysis and survey method for collecting both primary and secondary data. Under Survey Method, it is proposed to adopt Interview method to conduct collect primary data from citizens of Jammu and Kashmir who scattered their views about the psychological impact of armed conflict on people. Furthermore, primary data will be collected using both qualitative and quantitative methods. Whereas secondary data for the present study will be collected from, Books, journals, articles and other relevant information published in the dailies, weeklies, fortnightlies. Government documents, working committee reports, web sources form secondary data for the study.

Research Objective:
To analyse the psychological impact of armed conflict on People of Kashmir.
Introduction
Armed conflict is a contested inconsistency involving government or territory or both, in which the use of armed force between two gatherings results in at least 25 fight-related deaths per year. One of these two gatherings must contain the government of a state. The conflicts are divided into two categories based on their force: minor armed conflicts (fewer than 1,000 fight-related deaths per year) and major armed conflicts (more than 1,000 fight-related deaths per year). Armed conflict is, without a doubt, one of the most troublesome issues that the world is dealing with right now. Furthermore, its impact should be felt in all aspects of life. It leads to societal breakdowns in general. Youth make up the majority of the population affected by armed conflict and are thus disproportionately affected by conflict. Their plight takes many forms; they are killed and injured, denied education and medical care, and separated from their families. Mourning and impoverishing its kin, it carries torment, injury, hopelessness, and the loss of living souls and property with it. Territories and are directly or indirectly impacted by armed conflict. The influence of armed conflict on youth is unavoidable. Youth, as both victims and perpetrators of savagery, are among the most vulnerable groups affected by armed conflict. It had a staggering and disastrous impact, resulting in unavoidable social problem disorder, educational backwardness, physical and mental health deterioration, mass psychological depression, mass embarrassment and outrageous powerlessness, and decreased social hostility. It brought on-going social issues such as abnormality, suicides, illicit drug use, and crime, all of which were capable by a large portion of Kashmir's population. Young people are frequently the victims of violence. Young men and children are more vulnerable to conflict-related death and homicide; girls and young women are increasingly vulnerable to sexual violence, particularly in circumstances of armed conflict. The youth of Kashmir have been left perplexed by the government's failure to address issues of joblessness and poor educational quality at all levels. Youth have claimed that heavy militarization renders students, particularly females, powerless in the face of frailty, mistreatment, and badgering. Regardless of their reservations about politicians, young people show fearful support for democratic interaction because they believe elections are rigged on a regular basis in the valley and thus are not a viable means of achieving peaceful change. Or is it youth brain drain? Migration is unrestricted in the region, and a lack of capable and prepared human resources has had a significant impact on socio-economic development. Furthermore, political agitation contributes to the preparation of youth for protest and gains a significant amount of obliteration. Their animosity appears to be a form of retaliation for previous feelings of insult and corruption. It was discovered that uneducated youth, educated jobless youth, and school dropouts are all involved in fighting. This could be because they are less secure and are expected to be thrown into turmoil. Despite the fact that the majority of young people in Kashmir are publicly attracted to and aware of their fundamental liberties and obligations, they openly admit...
that they despise the sacred privileges that residents of a state should have. They believe their opportunities have been squandered under the guise of war, and that investigating the same old thing has resulted in unprecedented political outcomes.

Disappearances and killings
A large number of Kashmiris have been reported to have been killed by Indian security forces in guardianship, extrajudicial executions, and approved disappearances, and these normal freedom infringements should be completed by Indian security forces under full scale exception. Ordinary people, youth, including women and children, have been killed "accordingly" by Indian security forces. Overall, NGOs, like the US State Department, have revealed refusals of critical opportunities such as disappearances, torture, and optional executions carried out during India’s counter-psychological warfare exercises. The United Nations has expressed serious concerns about the large number of killings committed by Indian security forces. Basic freedoms groups have also accused Indian security forces of using child troopers, though the Indian government denies this charge. Until now, over 15,000 tenants, ostensibly including children, have participated in these self-defense social events. According to the International Committee of the Red Cross (ICRC), Indian security forces were genuinely mistreating detainees with beatings, electric shocks, and sexual impedance, according to the Telegraph, which alludes to a Wiki leaks report. These detainees were not Islamic revolutionaries or Pakistani-supported radicals, but rather regular residents, as opposed to India’s consistent cases of Pakistani affiliation. The detainees were "related to or recognised as having information about the instigators." According to the ICRC, 681 of the 1296 detainees it met admitted to torture. Enumerating specialists from the United States have been referred to "Psychological warfare assessments and legitimate questions will frequently rely on confirmations, many of which are obtained through intimidation, if not beatings, risks, or in some cases torment. Respite International accused security forces of abusing the Armed Forces Special Powers Act (AFSPA), which authorises them to "hold prisoners without primer." The social affair contends that the law, which allows security to confine individuals for up to two years "without presenting charges, manhandling prisoners' basic liberties," is unconstitutional. Army sources are aware of this "Any progress in rescinding AFSPA in Jammu and Kashmir would be detrimental to the Valley’s security and would give a boost to fear-based oppressors. Indian security forces have been linked to numerous reports of executed disappearances of thousands of Kashmiris, but the security forces deny having such information and authority. This is frequently associated with torture or extrajudicial killing. The number of male disappearances has been so high that a new term, "half-widows," has been coined for their wives, who are left with little information about their husbands' whereabouts. The amount of evaporated, according to basic liberty activists, is more than 8,000, and was last found in government confinement. The evaporated are known to have been dumped in a large number of mass graves across Kashmir. Common liberty activists have identified mass graves all over Kashmir that are
believed to contain tens of thousands of Kashmir’s confirmed vanishings. In 2011, the State Human Rights Commission certified that there are a large number of slug-ridden bodies shrouded in plain graves in Jammu and Kashmir. Rather than the Indian government’s desire that all of the graves have a spot with new attackers, 674 of the 2835 bodies discovered in four of the sixteen districts were identified as missing nearby individuals. According to a declaration issued in 2019 by Parvez Imroz and his field workers, the total number of plain graves was over 9,000.

**Torture**

Torture was used on purpose by Indian security forces and police, according to reports. In 2007, when they met an Indian agent, us experts expressed concern about the widespread use of torment. In 2012, essential freedom lawyer Parvez Imroz and his field workers began the most extensive investigation of torture in Kashmir according to the report, one out of every seven Kashmiris has stood up to torment. More than 3,000 unbelievable instance of torture were reorganised and recorded in Imroz’s survey trial of 60 towns, where he discovered that there were 60 centres run by the military and paramilitaries where torture was penetrated beginning around 1989.

**Sexual violence**

Rape is said to have been used as a weapon against the Kashmiri people. The systematic assault on Kashmiri Muslim women by Indian state security forces goes unpunished on a daily basis. According to a Human Rights Watch report from 1993, security forces use assault as a method of retaliation against Kashmiri customary people during kickback attacks, followed by attacker ambushes. According to teacher William Baker, the assault in Kashmir was not the result of two or three rebellious warriors, but rather a working procedure of the security forces to humiliate and frighten the Kashmiri people. According to civil liberties organisations, 150 high-ranking representatives, of the rank of major or higher, have participated in torture as well as sexual ruthlessness, and that the Indian government has covered up such incidents.

**Suicide and Psychological Problems**

Because of the conflicting circumstances, Kashmiri women are allegedly thought to be particularly prone to self-destructive tendencies. The primary goals are supposed to be the victory of dread, stress, strain, and vulnerability in the state. According to a 2018 study, 17,000 people, the majority of whom were women, committed suicide in the Valley in the previous 20 years. Medicines Sans Frontiers conducted a review “Since the nonconformist battle escalated in 1989–90, women in Kashmir have suffered greatly. They have been assaulted, tortured, mutilated, and killed, just like the women in other conflict zones. A few of them were even imprisoned together for an extended period of time. Kashmiri women are among the world’s most heinous sexual savages. Sexual savagery has been practised on Kashmiri women on a regular basis, with 12.8 percent of respondents reporting having been victims of sexual abuse. "As a result of the conflict,
many people in the valley are suffering from various psychological issues such as stress (typical or related to a terrible accident), nervousness, state of mind, and post-traumatic problems. There were 1900 patients in the valley's sole mental clinic at the start of the rebellion.

**Fake encounters and killings.**

Numerous youth, including women and children, appear to have been extra judicially executed by Indian security forces, and the killings are being portrayed as fabricated incidents. Regardless of the government’s denial, Indian security experts are said to have admitted to Human Rights Watch of the overall occurrence of phoney experiences and its relief for awards and advancements. According to a BBC interview with a strange security individual, 'fake encounter' killings are those in which security personnel kill someone without hesitation while simultaneously claiming that the misfortune occurred in a weapon battle. It also declares that the security team belongs to Kashmir and that they "even surrendered aggressors." In 2018, three men were represented missing strategy these missing reports. 5 men identified as aggressors were killed in a coordinated weapon battle; the military also claimed to have discovered Pakistani cash among the dead. As a result, the major was suspended and a senior fighter was relieved of his duties. In 2019, a Special Police Officer and an Indian Army Jawan were charged by Kashmir police with manslaughter of a non-military work force member, whom the group had killed in an encounter, ensuring that he was a top Lashkar-e-Taiba militant.

**Mental health of Youth**

Mental health is described as a state of flourishing wherein every individual comprehends their own idle limit, can adjust to the common anxieties of life, can work usefully and gainfully, and can add to her or his neighbourhood. According to the World Health Organization, also psychological prosperity fuses "theoretical flourishing, saw self-simplexes, autonomy, expertise, between generational dependence, and self-acknowledgment of one’s insightful and enthusiastic potential, among others." From the more broad view, treatment of, and attitude toward psychological well-being messes in the Kashmir is an endless trip as it has been in the rest of the world. There is an inadequacy of assessment connecting with the mental and psychological well-being necessities of people living in Kashmir. The on-going struggle has caused huge harm in Kashmir.

Numerous people have become losses from mental injury, stress, disquiet, anguish, and other mental infirmities communicated that one of the huge results of this somewhat long unsettling influence is the impact on the emotional well-being of people in Kashmir. This is actually an issue of the way that the power associated with emotional wellness issues genuinely have basically raised since the political violence began. In Kashmir, where, mercilessness and weapon fights have been a piece of normal everyday
preseence all through on-going many years. Individuals in the valley are endeavouring to keep their normal sufficiency. Without a doubt, individuals in Kashmir are living in a constant state of fear and that has brief a rising in patients of trouble, disquiet, and various conditions related to psychological prosperity. Despite how speedy we think we are pushing toward harmony and headway, reliably a danger of is being captured, or being gotten in a registration time, or being engaged by a horde, or hit by the police.

Medications Sans Frontiers (MSF), the non-government organization affirms that one out of five adults in Kashmir is living with post-traumatic stress problem (PTSD). Plus, they also expressed that the commonness of psychological distress is higher among ladies. MSF expressed, "60 for each lady and 47 for every one of man have liable to be analysed discouraged, 39 for every single lady and 28 for each man have an uneasiness issue, and 25 for each lady and 21 for each man have PTSD." The examination was coordinated by MSF, in a joint exertion with the University of Kashmir and the Institute of Mental Health and Neurosciences, from October to December 2019 out of 493 towns in the valley. Hessian, A. (2016) summed up that in late many years, the quantity of people looking for mental help has taken off in the tested locale. Mental prosperity in Kashmir is declining at a disturbing speed and has treated numerous youthful patients who made gloom later the uprisings. As indicated by him, young colleagues have a reliable fear of getting captured once more, "he expressed, including that long stretch imprisonment has been associated with post terrible anxiety issue." "We have more youthful people providing to search for offer with some timely help. We have a scourge of passionate wellbeing issues, particularly bitterness." Hussein by then expressed that anxiety or depression impacts the valley the way cholera did. The abatement in mental prosperity has incited a development in substance misuse and suicide in Kashmir. Consistently, the quantity of patients looking for help at the just psychiatric hospital in the district has extended rapidly.

According to trained professionals, around 1900 patients went to the medical clinic in 1989, stood out from in excess of 120,000 every year prior. Private offices and region facility centres have moreover opened to take care of patients. In 2015, a review was directed to see the connection among conflict and wretchedness in Kashmir approved by the Sher-e-Kashmir Institute of Medical Sciences in Srinagar and they observed that the incapability of depression in the space is >59%. Likewise, it was tracked down that people in common areas women, and youngsters were particularly impacted. There are many explanations behind mental trouble, Hussein said, yet on-going political unrest is an important one. "It was accepted to be an affliction of reasonably matured people; nonetheless, presently an immense number of people are nearby 17 and 34 years old. An emotional wellness study was led in 2018 in Kashmir by Doctors without Borders (MSF) as a team with the Institute of Mental Health and Neurosciences (IMHANS), Srinagar. The review uncovered that the mental health emergency has arrived at the extents of a plague in Kashmir. Scientists guarantee that 1.6 million grown-ups
communicated the indications of discouragement, altogether followed by 1 million populaces experiencing the side effects of uneasiness, though 95% of Kashmir is have encountered injury connected with struggle and 21% of the grown-up populace showed PTSD symptoms.

**Conclusion**

Countless youths are engaged with an on-going conflict; large numbers of them have lost their lives and a considerable lot of them are in correctional facilities, authority and cross examination communities. Thousand Kashmiri youths enduring with hunger, neediness, unemployment, loss of their kin, family members before him, re event of contemplation, flashbacks are helpless against psychological disorder. They are losing their lives, their psychological equilibrium their prosperity and confronting strict strain, peer pressure, family pressure, community pressure prompting stress and strain, loss of independence antagonism drive unfriendly environment hindering to psycho social wellbeing. The armed conflict influences the youth’s psycho social and passionate soundness which prompts disappointment in their method for dealing with stress. Armed conflict prompts grievous outcomes. The primary point of the present research was to perceive how outfitted conflict has psychologically impacted the youth of Kashmir by the drawn out low-power conflict in Kashmir. Emotional wellness issues are reliably expanding with a disturbing sign. Keeping in thought the above research audits, there is a desperate expansion in the quantity of individuals experiencing diverse mental issues, which are very disturbing contrasted and other states of India. Government spending on emotional well-being administrations in Kashmir are undeniably not exactly is required. More administrations ought to be given to meet the treatment and backing occupants generally. It is the need of great importance to improve the psychological wellness administrations in Kashmir so it can diminish incapacity, the danger of a few dysfunctional behaviours, and control sudden passing.
